CIT 140 · Week 4 · Cedar Junction

Validated Requirements Set

Week04 · Revision 3587

R-01 · functional

Requirement: The system must easily distinguish and show the department (Scheduling or Intake) that made the change in status.

Source: W04-S01 · Dana Ruiz

Rationale: This can prevent confusion as it will clearly state what the status means given that the department (and its definition of the term) is stated.

Acceptance check: Adding (I) or (S) next to the status when the respective department/step makes the change.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Held means the visitor has arrived but cannot move forward in Intake. It means that a slot still needs final confirmation in Scheduling.

R-02 · user

Requirement: The system must inform the users of the status and the department that changed it.

Source: W04-S01 · Dana Ruiz

Rationale: Prevents slow down in process and prevents confusion.

Acceptance check: A user can see status identifier and call department responsible to confirm status change (If they must check)

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: Held means the visitor has arrived but cannot move forward in Intake. It means that a slot still needs final confirmation in Scheduling.

R-03 · business

Requirement: The system must confirm the clinician and room are ready before offering a same day appointment.

Source: W04-S02 · Dr. Lena Okafor

Rationale: This will prevent the possibility of cancellations and over bookings. Thus making workflow more manageable.

Acceptance check: Appointment slot becomes available wen both clinician and room are in ready state.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: The clinician and the room must be ready before appointment can be made available and filled.

R-04 · functional

Requirement: Same day appointment slot becomes available to be filled

Source: W04-S02 · Dr. Lena Okafor

Rationale: Smooth operation with minimal or no overbooking.

Acceptance check: Schedulers check statuses and make changed to daily schedule as changes are made.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: The clinician and the room must be ready before appointment can be made available and filled.

R-05 · user

Requirement: The system must push communication and support information to the intake queue.

Source: W04-S03 · Priya Shah

Rationale: This will prevent visitors from repeating information which can cause friction.

Acceptance check: Give intake staff access to see necessary screens with visitor information.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: By pushing relevant information to all authorized staff not just keeping it at intake.

R-06 · constraint

Requirement: Provide automated phone system that asks necessary questions that will then be transcribed and added to visitor information screen.

Source: W04-S03 · Priya Shah

Rationale: This gives visitors that do not know how to use or cannot access portal a way to provide information for their visit.

Acceptance check: Automated system that transcribes information and adds it to visitor info screen. Add identifier automatically so staff can know that information was put in using automated service. (if needed)

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: By pushing relevant information to all authorized staff not just keeping it at intake.

R-07 · nonfunctional

Requirement: Names, appointment time/date, and status.

Source: W04-S04 · Jordan Kim

Rationale: Identifies the visitor, what time they need to be seen, and where they are in the check in process.

Acceptance check: By checking shared displays with appropriate filters

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: All visitor information to be shown on shared displays is limited to name, appointment information and visitor status.

R-08 · functional

Requirement: Who changed it and when it was changed. Along with a short history of previous status changes.

Source: W04-S04 · Jordan Kim

Rationale: Can get a glimpse of what the visitor has done and provides information on who ha made changes for follow up if an issue arises.

Acceptance check: By checking history with appropriate access.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: All visitor information to be shown on shared displays is limited to name, appointment information and visitor status.

Professional Guidance Assessment

IIBA: The IIBA provides a standard for business analysis and offers credentialing that is recognized worldwide.

ISO/IEC/IEEE 29148: They contribute a standard for software products and other systems and their required processes throughout their lifecycle.

PMI: PMI focuses on the delivery of a project while week 4 on adjustments to an existing workflow.

Application: This guidance helped me improve R0-07 as it clarified what can and cannot be shown to staff with various security/ access levels.

Prepared in Command Nexus. Canvas remains the official submission point.
